

## Karst King or Karst Klutz Cards

<p>1. Soil eroding from construction sites isn't a problem.</p>	<p>2. Create and maintain vegetated filter strips along streams in agricultural areas to stop erosion.</p>
<p>3. There is no harm when sediments from erosion enter a waterway or underground.</p>	<p>4. Septic systems if not properly maintained can cause bacteria to enter nearby wells.</p>
<p>5. Old abandoned wells that collect surface runoff should be ignored and not bothered with.</p>	<p>6. Sinkholes and losing streams connect surface runoff to groundwater.</p>
<p>7. Groundwater pathways have been traced with dyes inserted in various locations to numerous springs.</p>	<p>8. "Out-of-sight" is "out-of-mind." What you can't see underground can't hurt you.</p>
<p>9. Avoid locating septic systems near sinkholes and wells.</p>	<p>10. Once installed, septic tanks do not ever need inspection or to be pumped out.</p>

## Karst King or Karst Klutz Cards

<p><b>11.</b> A sinkhole is a good place to put unwanted tires, appliances, and hazardous substances.</p>	<p><b>12.</b> Don't be concerned about any amounts of paints, solvents, waste oil, and pesticides going down drains into septic tanks or lagoons.</p>
<p><b>13.</b> Caves are the result of limestone or dolostone rocks being dissolved by rainwater that infiltrates from the surface.</p>	<p><b>14.</b> Nonpoint source water pollution is not a problem in the Ozarks.</p>
<p><b>15.</b> Nonpoint source water pollution can be traced to a single source.</p>	<p><b>16.</b> When clearing land or harvesting timber, there is no need to reseed or mulch bare soil in the area.</p>
<p><b>17.</b> When harvesting timber, stream areas need to be protected from erosion.</p>	<p><b>18.</b> Spring water is always safe to drink.</p>
<p><b>19.</b> Cattle on stream banks can cause potential problems for the water quality of the adjoining stream.</p>	<p><b>20.</b> Overgrazing causes erosion.</p>

## Karst King or Karst Klutz Cards

<p><b>21.</b> Erosion is a major cause of sediment pollution.</p>	<p><b>22.</b> Read and follow the label directions carefully for all household hazardous wastes, including disposal instructions.</p>
<p><b>23.</b> Soil doesn't need to be tested before fertilizing.</p>	<p><b>24.</b> Cave creatures may become rare or endangered by excessive sediments that enter from sinkholes and losing streams.</p>
<p><b>25.</b> A sinkhole forms when the ceiling of an underground cavity or cave collapses.</p>	<p><b>26.</b> The word 'karst' describes areas of limestone or dolomite rock that have many caves, springs, sinkholes and losing streams.</p>
